

## **Global Technology, Service and Fulfillment Network Computing Group**

### **Mainframe Build**

The Mainframe Build group provides continuous operating, computing and network services for the Bank of America consumer, commercial, global and wholesale banking groups. Mainframe Build is responsible for the transaction, database and message queue managers, mainframe operating systems and logical network services. Mainframe Build teams include CICS, DB2, IMS, WMQ, Z/OS Communications and Operating System Services.

### **Qualifications:**

The ideal candidate exhibits a strong drive for results; displays a sense of urgency. Succeeds in a collaborative environment; enjoys teamwork and partnering with others. Excellent organization skills and judgment. Understands technology and business requirements. Ability to learn the organizational structure and the formal/informal workings of the organization. Conveys a strong sense of customer and associate satisfaction to drive shareholders value.

The ideal candidate will be proficient with basic IBM Mainframe applications such as transaction and database managers, message queue managers, and operating system and network services. Technical skills should include knowledge of some of the following technologies: CICS, DB2, IMS WMQ, Z/OS Operating Systems as well as competent in Job Control Language (JCL) and Assembler language. Functional skills should include project management skills and financial industry knowledge. Candidates must be enrolled in a full-time degree program, pursuing a major in Computer Science, Business, Engineering, or Information Technology.

### **Associate Responsibilities:**

Candidate will be assigned to a specific Mainframe Build technology team or rotate among several teams. The candidate will be mentored by a senior technician and be exposed to the following:

- Design, develop, implement and enhance transaction, database, communication and operating systems in support of business goals.
- Analyze, track, and troubleshoot performance of assigned system to ensure that all information processing and delivery requirements are met.
- Support the configuration, implementation, administration, monitoring and ongoing maintenance of assigned system.
- Provide project management support relating to process improvement in technology.
- Provide analytical support for data collection and measurements
- Participate in design, development and implementation of complex applications, often using new technologies.

### **Mainframe Build Position Benefits**

- Gain first hand knowledge on large-scale IBM data processing environment
- Gain insight into various mainframe systems support disciplines
- Learn about Six Sigma and how it is being used to accomplish BAC goals
- Observe management of world-class data processing professionals

### **Available Locations:**

- Richmond, Virginia                   ? Concord, California
- Richardson, Texas                   ? Charlotte, North Carolina

### **Training**

Associates will also attend a one-week Education and Orientation program to learn more about Bank of America and Global Technology, Service & Fulfillment.

### **How to Apply:**
